

The EQulS PlanEngage platform makes technical reports and data easily accessible, interactive and highly visual for improved engagement, faster project permitting, and better environmental and social outcomes.

EarthSoft partnered with AECOM to offer an integration of data through a REST API connection. This integration allows EQulS users to have simple and easy communication with key project stakeholders throughout the lifecycle of a project.

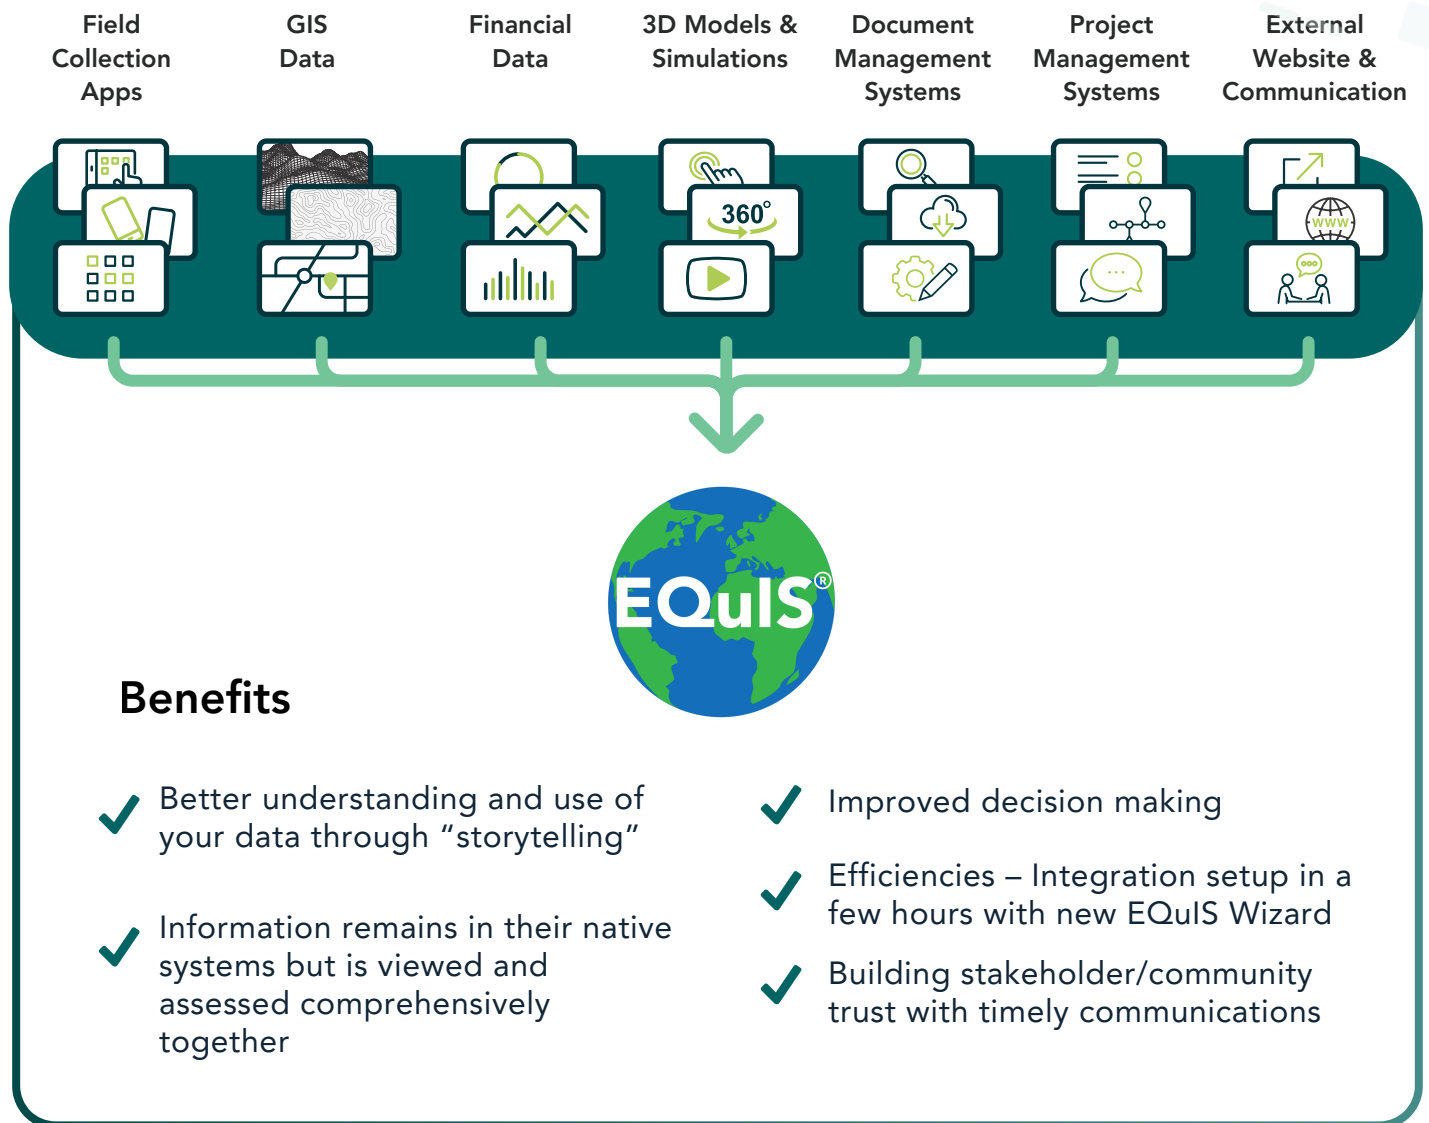

- Easily integrates EQulS data with other data sources into aggregated views (financial reporting, compliance tracking, document management, and more)
- Seamlessly brings geographical context with embedded GIS
- Comprehensive view of your data – Let the data tell the story
- Streamlined stakeholder collaboration – Interact with the data
- Secure and scalable – Depends on Microsoft Azure and EQulS security levels, permissions, and authentications

Single unifying platform that tells the project story!

Information
remains in the
native systems

Improve decision-making and create a secure, accurate, and accessible single source of truth. Gain a comprehensive understanding of your projects by extending traditional charts and graphs. Bring your data to life with dynamic GIS and a wide variety of interactive tools accessing and visualizing disparate information! Create critical insights, enable seamless collaboration, and bring value by telling data stories with EQulS, GIS, and PlanEngage.

Benefits

- ✓ Better understanding and use of your data through “storytelling”
- ✓ Information remains in their native systems but is viewed and assessed comprehensively together
- ✓ Improved decision making
- ✓ Efficiencies – Integration setup in a few hours with new EQulS Wizard
- ✓ Building stakeholder/community trust with timely communications

Own the workflow, make better decisions
